_____

Installation Instructions for the Pioneer Book Store Database

Overview

This document lists the files used and describes the steps taken to create the book store database. The order for running the scripts is

1. Create the database (create_schema_bookstore_database.sql): This step will create the book store database.
2. Run the create script (create_tables_bookstore_database.sql): This step will remove any previous copies of the tables you might have had.
3. Run the insert script ((insert_data_bookstore_database.sql): This step will delete any data from the tables and then insert the data.

List of Files in the Zip File

The following is the list of the files included in the downloaded zipped file:

File Name	Description
create_schema_bookstore_database.sql	The primary script that creates the book store database.
Create_tables_bookstore database.sql	A script that creates the tables.
insert_data_bookstore_database.sql	A script that populates the book store database tables.
installation instructions for the bookstore database.pdf	The file you are currently reading that contains installation instructions.
the bookstore_database.pdf	This file graphically displays (the book store database).

You need to study the pdf document included (the bookstore_database_database.pdf). The file includes the graphic for the tables.

If later in the semester you want to get back to the original set of data, and you have not dropped any of the tables, you can just run the inserts script.
